## Senior Software Engineer - UI

Location: Kingston, Jamaica

Category: DCH Platforms and Products

Sub Category: Engineering

Req ID: 11465

**ZS** is a professional services firm that works side by side with companies to help develop and deliver products that drive customer value and company results. From R&D to portfolio strategy, customer insights, marketing and sales strategy, operations and technology, we leverage our deep industry expertise and leading-edge analytics to create solutions that work in the real world. Our most valuable asset is our people—a fact that's reflected in our values-driven organization in which new perspectives are integral and new ideas are celebrated. ZSers are passionately committed to helping companies and their customers thrive in industries ranging from healthcare and life sciences, to high-tech, financial services, travel and transportation, and beyond.

**ZS's Digital Connected Health Team** helps healthcare companies including pharmaceutical and med-tech to discover, develop and deliver digital services to customers. We engage from end-to-end from shaping organization strategy (where to play, how to win) to developing digital solutions for patient services across disease journeys, drug discovery including de-centralization of clinical trials, advancing digital portfolios through enabling digital therapeutics and Software as Medical Devices (SaMD).

### Job Description

The Senior Software Engineer (UI) will be responsible for recommending and designing the technical solutions for proposed application features, improving the functionality of existing applications, troubleshooting, debugging, and resolving application issues, and overseeing the maintenance of released products all whilst adhering to and enforcing best practices and standards in the technology domain.

This role will also see you monitoring, mentoring, guiding, and training the engineering team. In addition to leading, you should be able to acquire user requirements, estimate feature completion, contribute, and participate throughout the entire system development life cycle.

## Responsibilities and Duties

- Demonstrate a passion for web development, have an eye for well-designed user interfaces, and be extremely detail-oriented
- Implement major features with limited guidance from leads and managers
- Implement solutions for responsive web including mobile and tablet screens.
- Be a technical expert in front-end technologies, mentor junior engineers and support leads in strengthening the technology team
- Create technical design documents for a product, feature, or application
- Code and debug custom-built applications
- Upgrade and maintain existing applications
- Collaborate with cross-functional teams including clients, user experience designers, user experience researchers, and product managers to ensure our solution meets user needs
- Collaborate with engineering leads, quality engineers and architects to ensure implemented solution aligns with requirements and established architecture guidelines.
- Contribute to the organization's and project team's development standards and best practices
- Ensure implemented solutions adhere to industry standards for security, performance, and web architecture.

## Qualification and Skills

- Bachelor's degree in computer engineering/computer science or related field
- 3 – 6 years of experience developing complex web applications
- Proven and demonstrable experience with UI scripting languages including jQuery / JavaScript, HTML5, CSS, Web Services/APIs, and SQL
- Strong experience with experience with CSS3/CSS preprocessors including SASS, LESS, etc.
- Strong experience working with one or more UI frameworks such as Angular, Vue, React, Bootstrap, or others
- Strong working experience consuming REST API using asynchronous methods
- Strong working experience with version control systems (Git/Gitlab) and branching strategies
- Experience developing using best practices including SOLID, Demeter, DRY etc. is a plus
- Experience implementing UI design using CSS best practices including BEM, SMACSS, etc. is a plus
- Experience with Asp.Net, Java, NodeJs and mobile development is a plus.
- The ability to collaborate in a team environment, and be able to adapt effectively and quickly to changing environments

- Strong written and verbal communication skills
- Excellent organizational and leadership skills
- Experience working in an Agile Software Development Methodology ecosystem
